

System Component	Phase Number	Phase Name	Functional Description	Required Artifact Type	Audit/Validation Criteria (Inferred)	Source
BIBLE (Think/Plan)	01	IDEA	Verbose summary of the system/project conceptualization as specified; restating the core intent or problem to be solved as the Best Next Prompt (BNP).	summary / Project Manifesto / Concept Document	Must satisfy S1 (Intent/Feasibility) by restating user goal in one sentence; satisfy L4 by ensuring inbound prompt score \$Ige 99\$; align with L1 (Conceptual Integrity) and L10 (Original intent).	1 2 3
BIBLE (Think/Plan)	02	BREAK_OLD	Deconstruction of existing solutions or legacy constraints where the best old solution fails in the real world. Mandatory phase per L1.	audit	Evidence-based analysis (S3) of failures in existing solutions; L6: Evidence of existing system failures; S4: Artifact/BNP presence.	1 2
BIBLE (Think/Plan)	03	BREAK_NEW	Hostile internal audit of the idea at its best to find flaws.	audit	Internal hostile audit to satisfy L6 (Evidence over claims) and S3 (Evidence).	1
BIBLE (Think/Plan)	04	RESEARCH_HUNT	External and supplied source information gathering for technical precedents and external evidence.	hunt	Grounded in external/supplied sources (L6); S3: Citations and file paths required.	1 2
BIBLE (Think/Plan)	05 / 10	SHOULDER_ANGELS	Strategy evaluation comparing safe vs. bold paths and forecasting outcomes to lock one path. Mandatory gating phase.	plan / report	Forecast outcomes must be present; L6: Human authority check; failure to include requires SKIP_REASON.	1 2
BIBLE (Think/Plan)	06	BRAINSTORM	Development of multiple approaches while remaining strictly under the path locked in phase 05.	summary	Must demonstrate multiple approaches within the locked path constraints.	1
BIBLE (Think/Plan)	07	DESIGN	Architectural and structural blueprint of the proposed solution; interface/architecture planning.	spec	S2: Scope focused on architecture; L4: Design quality score \$Ige 99\$; must be a durable spec object.	1 2
BIBLE (Think/Plan)	08	IMPROVE	Tighten the architectural design against the failures identified in phases 02, 03, and 05.	spec	Validation against the 'Break' audits and path forecasts.	1
BIBLE (Think/Plan)	09	PLAN	Ordered build plan and step-by-step execution strategy; identifies dependencies and risks.	plan	S6: BNP ready for next phase; L5: Context fit/split check; prohibits whole-product dumps.	1 2
BIBLE (Think/Plan)	11	HUNDRED_GUARANTEE	Proof checklist: what exists, how verified, and rollback procedures. Aligns with 100% Guaranteed Protocol.	audit	Checklist-based verification to ensure 100% success per the protocol; Mandatory gate.	1
BIBLE (Think/Plan)	12	SPEC	Final implementation-ready technical specifications and requirements documentation.	spec	L10: Wording/completeness improved; L6: Evidence over claims; serves as ground truth for building.	1 2
BIBLE (Think/Plan)	13	BUILD	Initial creation/coding of the Bible-spine prototype or core assets; plan-level construction.	file	S4: Work/Deliver/Artifact present; L2: Work vs Deliver separation; prohibits full-product script generation.	1 2
BIBLE (Think/Plan)	14 / 25	TEST / TESTS	Validation of the system/executable tests against requirements and functional test cases.	test	S3: File paths for test logs; L4: Verification score \$Ige 99\$; derived from phase 12 spec.	1 2
BIBLE (Think/Plan)	15	BUG_HUNT	Audit of current work and hunting for bugs against the specification defined in phase 12.	report	Direct comparison between current progress and phase 12 ground truth.	1
BIBLE (Think/Plan)	16	BREAK	Hostile testing to find failure modes in the planned architecture.	report	Systematic attempt to break the planned system structure.	1
BIBLE (Think/Plan)	17	OPTIMIZE	Measurement of performance constraints including cost, latency, context, and complexity.	report	Quantifiable measurement against specific performance targets.	1
BIBLE (Think/Plan)	18	ALPHA	Definition of the Minimum Viable Product (MVP) scope; smallest shippable unit.	plan	Identification of core features required for initial release.	1
BIBLE (Think/Plan)	19	BETA	Documentation of hardening steps and production readiness definitions.	plan	Detailed requirements for system hardening.	1
BIBLE (Think/Plan)	20	PRODUCTION_V1	Final gate for the BIBLE spine. Finalization of the initial version before entering BUILD spine.	summary / file	L9: Stop replay of Idea/Production loop; S6: Transition to BUILD or UNLOAD.	1 2
BUILD (Make)	21	INVENTORY	Mapping BIBLE specs to existing files to identify implementation gaps.	report / audit	Verify mapping to BIBLE spine; identify gaps only; do not invent new stack.	1 2
BUILD (Make)	22	ENGINE	Delivery of core logic changes and runtime/core deltas.	dif	Artifact must be a durable code object/dif.	1
BUILD (Make)	23	INTERFACE	Focus on HUD, UX, and API surface area as defined in the DESIGN phase.	file	Implementation of the external-facing system surface.	1
BUILD (Make)	24	SURFACES	Detailed implementation of individual user-facing UI/UX components.	file	Granular development of specific surface elements.	1
BUILD (Make)	26	VERIFY	Validation of the build in a live, simulated, or replay environment.	report	Confirmation of build stability in target environment.	1
BUILD (Make)	27	BUG_HUNT_LIVE	Identification of bugs within the active runtime environment against running constraints.	report	Real-time bug detection and reporting.	1
BUILD (Make)	28	BREAK_HOSTILE	Systematic attempt to break the implemented patch or delta.	report	Testing the resilience of the specific implementation changes.	1
BUILD (Make)	29	OPTIMIZE	Measurable performance and code improvements.	report	Quantifiable optimization of the implemented build.	1
BUILD (Make)	30	PRODUCTION_PATCH	Delivery of final changes including unified difs, file lists, and rollback procedures.	dif	Must include rollback plan; S4: Durable dif artifact.	1 2
BIBLE Spine	P1	Genesis / Scope	Define the core mission and boundaries of the work loop.	Vision Statement / Manifesto	Must satisfy L1 (Integrity) and L3 (Scope Clarity); S1 Gate Approval.	4
BIBLE Spine	P2	Architecture / Logic	Design the systemic flow and structural constraints of the kernel.	System Blueprint	Alignment with L4 (Consistency); S2 Technical Validation.	4
BUILD Spine	P3	Execution / Prototyping	Transform logic into tangible functional iterations.	Minimum Viable Artifact (MVA)	L7 (Efficiency) compliance; S3 Performance Review.	4
BUILD Spine	P4	Refinement / Optimization	Iterative polishing of the artifact based on loop feedback.	Optimized Build Document	L10 (Finality); S6 Quality Assurance.	4
